CASTLE ACCESS COMPLETES SAS70 AUDIT FOR ENTERPRISE DATA CENTER

July 27, 2009 (SAN DIEGO, CA) - Castle Access, Southern California's leading provider of Tier III enterprise grade data centers, announced today that they have completed their first full SAS70 Type II audit for their new Enterprise Data Center in Rancho Bernardo.

A SAS70 Type II audit is an industry standard that is designed to provide reasonable assurance that a given risk will be mitigated or detected in a timely manner to preclude service interruption, financial misstatement, or any other negatively perceived impact. Third-party independent auditing firm Grant Thornton performed the SAS70 Type II audit for the period that ended on May 31st and focused specifically on Security, Change, Incident and Facility Management in the Data Center environment.

"Operation procedural consistency and integrity are important in our business," said Mark Barlow, Chief Operating Officer of Castle Access. "The successful completion of the SAS70 audit only confirms what Castle Access clients have experienced for years - superior dependability in all facets of Collocation."

About Castle Access Castle Access offers customized collocation solutions, network security and bandwidth-neutral network connectivity. With the addition of a new 88,000 square foot collocation facility, Castle Access provides unsurpassed power availability, HVAC, security, dual NOC and network diversity for Enterprise clients, solution providers, content providers and telecommunication carriers.

Castle Access recently deployed the first phase of their new collocation space during the 1st quarter of 2009, located at 12270 World Trade Drive in Rancho Bernardo, California.
